Weeks 6 and 7
Word Formation Processes

1

internal use only

Contents

1. Derivation
2. Reduplication
3. Conversion or Function shift
4. Compounding
5. Blending
6. Back formation
7. Shortening
8. Root Creations

2

1. Derivation

- **Derivation** is the addition of a derivational affix.
- Derivational affixes are either …….. or ……..
- Examples:
  - ……. : un-, mis-, pre-,…
  - ……..: -ish, -ism, -ness, …

3

internal use only

1. Derivation

The addition of a derivational affix to a root produces a new word with one or more of the following changes:

- ***A*** …….. ***change***: reduce → reduction, clear → clarity.
- ***An*** …….. ***change to the root***: pity → pitiful, deny → denial.
- ***A*** …….. ***change, which may be fairly complex***: event → eventual, post → postage.
- ***A change in*** …….. : rich (n) → enrich (v).

4

1. Derivation

- Most **prefixes** can change only the …… …….. , not its class.
- **Suffixes** have two functions:
  - Change the ……..
  - Change the …….. .

5

internal use only

Prefixes

1

- Only 3 prefixes can change the part of speech of the root:

…… *N/V → Adj*	*ablaze, asleep, astir*
…… N→V	*betoken, befriend*
…… *A/N → V*	*enlarge, ensure*

- Other prefixes can change only the meaning of the root.

6

Prefixes

1

- **Prefixes** fall into a number of …… in English, depending on the meaning they contribute to the roots.
- Some **prefixes** may fit into …… category.
- **Prefixes** may often attach to …… part of speech.

7

internal use only

Suffixes

1

Change the meaning of the root	Change the part of speech of the root
Diminutive suffixes	**Adj/ V + Nominalizer → N**
-ling, -let, -y	*-dom, -ity/ -ment, -er*
Feminine suffixes	**N/ Adj + Verbalizer → V**
-ess, -ette, -rix, -ine	*-ify, -ize*
Abstract suffixes	**N/V/ Adj + Adjectivalizer → Adj**
-ship, -hood, -ism	*-ous, -ful/ -ive, -able/ -ish, -ly*
	Adj/ N + Adverbializer → Adv
	-ward, -ly/ -way(s)

8

1. Derivation

- Derivation can be stated in terms of lexical rules

E.g.

mis- + align (V) + *-ment* → misalignment (N)

Image (N) + *-ine* + -ary → imaginary (Adj)

9

internal use only

2. Reduplication

- **Reduplication** is the process in which the initial syllable of the entire word is ……..…., exactly or with a slight phonological change.

- 3 different kinds of reduplication

10

2. Reduplication

- …….…. **reduplication**: *papa, mama, goody-goody, so-so.*
- …….…. **reduplication** in which the vowel alternates while the consonants are identical: *flip-flop, zig-zag, ping-pong, wishy-washy*.
- …….…. **reduplication** in which the consonants change while the vowel remains the same: *roly-poly, helter-skelter*.

11

internal use only

3. Conversion/ Function shift

- A **function shift** is the **conversion** of one part of speech to another without the addition of a suffix.
- In other word, a …… derivational suffix is added.
- The only concrete change that may occur is a change in stress.

12

3. Conversion/ Function shift

- **Kinds of function shift**:

V -> N: (a)

N -> V: (to)

A ->V: (to)

N -> A:

A ->N:

Particle -> V:

13

internal use only

3. Conversion/ Function shift

- It is often difficult to know which is the original (basic) form and which the converted form.
- **Clues**:
  - Semantics or morphological modification.
  - The regularity of ……..…..
  - ……..…. change in the case of conversion of phrasal V to N and Adj.

14

3. Conversion/ Function shift

- **Commonization** is a special kind of function shift in which a proper noun is converted into a common word.
- With ……..….change
  - N: cashmere, china; V: canter, welsh;
  - Adj: frank, maudlin
- With a ……..……→ different part of speech
  - N: *chauvinism ; V: pasterize*

15

internal use only

4. Compounding

- **Compounding** is the combination of …… ……..…. free roots (plus associated affixes).
- Common English compounds: *bookcase, fingerprint, sunburn, textbook, wallpaper, gook-looking, fast food.*

16

4. Compounding

Compound	Phrase
▪ Consists of ……..…… free root ▪ May be semantically ……..….	
Free roots are joined together as ……..….	Free roots are joined in a single syntactic unit but remain ……..…..

17

internal use only

4. Compounding

Compound	Phrase
……..…. modified Manhole → manholes, Not *menhole	……..…. modified Man-of-war → men-of-war
External ……..….: can move into a sentence as a whole	Part of the phrase can move into the sentence
Carries only ……..…. primary stress	Carries more than one primary stress

18

4. Compounding

- The **semantics** of compounds are not simply a ……..…. of the meaning of the parts:
  - **Homeland**: land which is one's home
  - **Homemade**: something which is made at home
  - **Homestead**: a place which is a home

19

internal use only

4. Compounding

- The **syntax** of compounds is even more complex.

Principle:

- *The word class is determined by the head of the compound (rightmost)*
- *The primary stress is carried by the leftmost.*

* *Converted compounds are exceptions*.

20

4. Compounding

Compound	Phrasal Verb
- Have semantic ……..… - The meaning is not ……..…. from the meaning of the part	
……..…. modified	……..…. modified *burned down*
Carries only one primary stress	Carries more than one primary stress
	Behaves syntactically like phrases

21

internal use only

5. Blending

- **Blending** is accomplished by taking only the ……..…. of one word and joining it to the ……..…. of the other word.
- **E.g.**

- gasso(line) + (alco)hol → gasohol
- Sm(oke) + (f)og → smog
- Mo(tor) + (ho)tel → motel

22

5. Blending

- Sometimes one or other morphemes is left intact.

  E.g.

  sky + (hi)jacker → skyjacker

  docu(mentary) + drama → docudrama

23

internal use only

6. Back formation

- A word of one type is ……..…. to form a word of another type is called **back formation**.
- Back formation is the opposite of ……..….
- E.g.
  - *Emotion → emote*
  - *Peddler → peddle*
  - *Connotation → connote*

24

7. Shortening

- **Shortening** is the ……..…. of sound segments without respect to morphological boundaries.
- 3 types:
  - *Clipped forms*
  - *Acronyms*
  - *Initialism*

25

internal use only

7. Shortening

- **Clipping**: the result of deliberately ……..…. part of a word, usually either the ……..…. or the ……..…., while retaining the same meaning and same word class.
- E.g.

- Fanatic → *fan*
- Microphone → mike
- Mitten → …….
- Hamburger → ……..
- Refrigerator → ……..….

26

7. Shortening

- **Clipping**:
  - A word or ……..….a word in a phrase is clipped

    narcotics agent → narc

    moving picture → movie (a diminutive affix may be attached to the clipped form)

  - A clipping may leave behind a ……. ……. rather than (part of) the …….

    ex-husband → ex

27

internal use only

7. Shortening

- **Acronyms**: The ……..…. letters of words in a phrase are **pronounced** as a word.
- E.g.

- WASP: White Anglo Saxon Protestant.
- NATO: North Atlantic Treaty Organization
- Radar: radio detecting and ranging.

28

7. Shortening

- **Initialism**: The letters of words in a phrase are pronounced as ……..…. .
- E.g. - a.m
  - p.m
  - B.C
  - A.D

29

internal use only

8. Root Creation

- **Root creation** is the invention of an …… …….. root morpheme.
- E.g.: brand names
  - **Onomatopoeic words**: their pronunciation are imitative of animal sounds or natural sounds.
  - **Literary coinages**
